

3 Courses

Applied Machine Learning
Systems with FastAPI for
Developers

Deep Learning: Train Neural
Networks and Deploy with
Docker

Transformers and NLP: Fine-
Tuning Models with Hugging
Face

BOARD
INFINITY

Jun 2, 2026

Rohit Jha

has successfully completed the online Specialization

Machine Learning and Deep Learning for Software Engineers

Learners in this Specialization developed the practical skills required to integrate, deploy, and maintain machine learning models within production software systems. They applied core ML concepts through an engineering lens building and training models using Scikit-learn, TensorFlow, and PyTorch, and designing maintainable, modular ML components. Learners served ML models as production-ready REST and gRPC APIs using FastAPI and Flask, applied MLOps practices including experiment tracking, model versioning, and reproducibility using Git, DVC, and MLflow, and implemented CI/CD pipelines for continuous delivery of ML systems.

Abhay Gupta, Co-
Founder, Board Infinity

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
